# Korea's Combined Census in 2020

The 31<sup>st</sup> Population Census Conference, Nov. 29. 2022  
Jiyoun Lee, Junghee Kang  
(KOSTAT Population Census Division)

- 1 History of Census in Korea
- 2 Challenges and Strategies of 2020 Census
- 3 Achievements of 2020 Census
- 4 Planning for 2025 Census

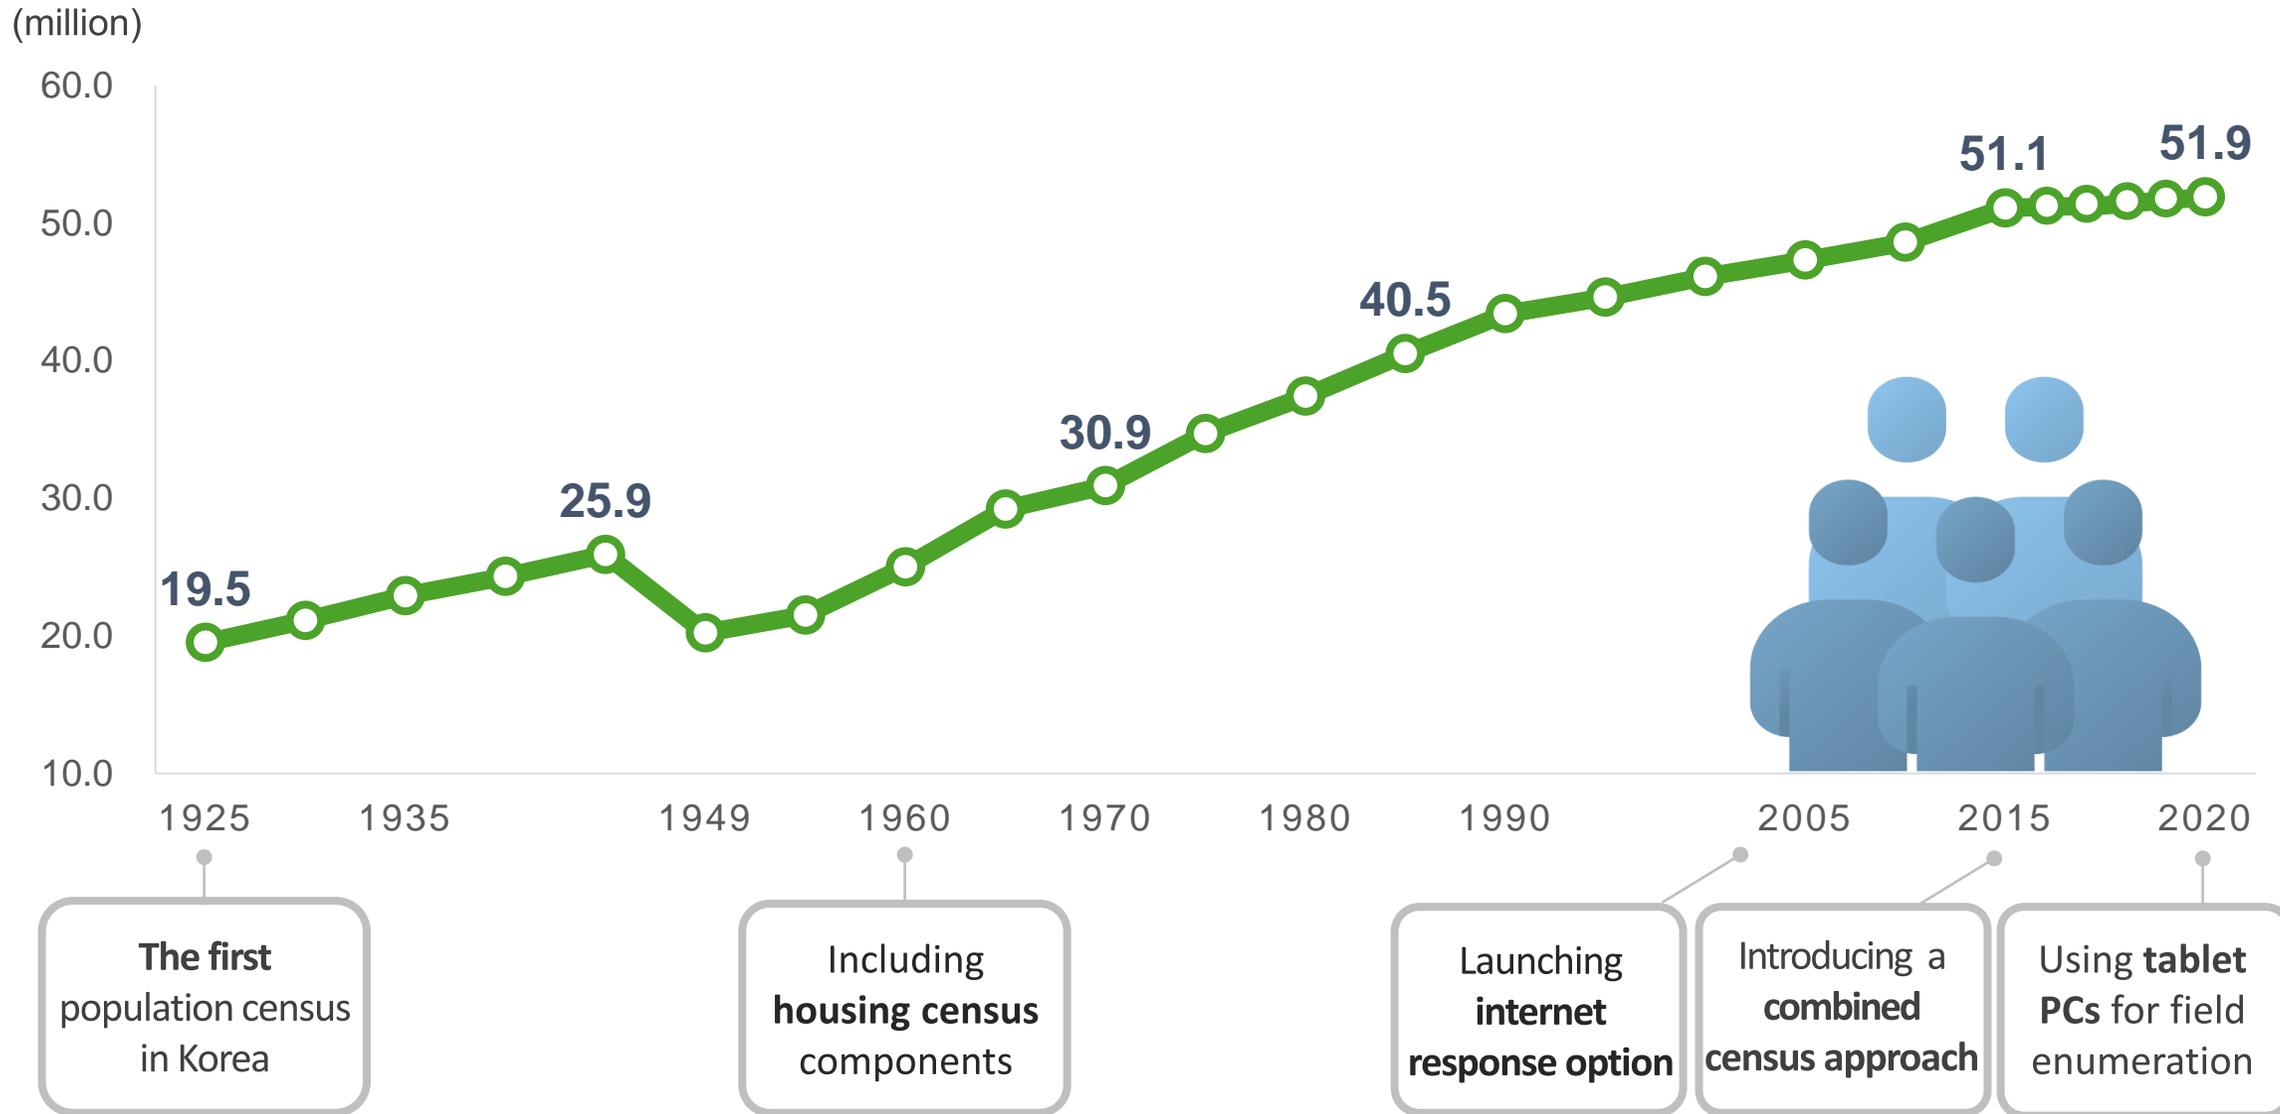

# 1 History of Census in Korea

Change  
tomorrow  
with your  
story

# 1) Census Population Counts, 1925 – 2021

## 2) Changes in the Census Methodology

### 1960 ~ 2010

#### Short-form

Includes basic items such as name, age, sex, household composition and housing characteristics

**Enumeration**  
(100% population)

#### Long-form

Includes detailed items such as economic activity status, commuting to school or work, etc.

**Sample survey**  
(10% of all households)

### 2015 ~

Available  
administrative  
data

Yes

Short-form

No

Long-form

Register-based  
census

+

Field sample  
survey (20%)

**2020  
Population  
and Housing  
Census**

- A **register-based census** is a new census method that produces statistics by using **administrative data** related to population, households, and housing.
  
- Since 2015, KOSTAT has conducted the **register-based census** to collect data for the **short-form questionnaire items** every year:
  - Gender, Age, Relationship to head of household, Nationality and so on.
  
- Every five years, KOSTAT has conducted the **field enumeration** for 20% of total population to collect **long-form questionnaire items**:
  - Education, Commuting time, Place of work, and so on.

| Sector                          | Survey Items                   | 2010 Census | 2015 Register-based Census |
|---------------------------------|--------------------------------|-------------|----------------------------|
| Population                      | Name                           | ●           | ●                          |
|                                 | Gender                         | ●           | ●                          |
|                                 | Age                            | ●           | ●                          |
|                                 | Relationship to Household Head | ●           | ●                          |
|                                 | Education                      | ●           | ○                          |
|                                 | Marital Status                 | ●           | ○                          |
|                                 | Nationality                    | ●           | ●                          |
|                                 | Date of Entry                  | ●           | ●                          |
|                                 | Place of Birth                 | ○           | ○                          |
|                                 | Place of Residence 1-Year Ago  | ○           | ○                          |
|                                 | Place of Residence 5-Years Ago | ○           | ○                          |
|                                 | Date of Marriage               | ○           | ○                          |
|                                 | Number of Children             | ○           | ○                          |
|                                 | Family Clan                    | -           | ●                          |
| Year of Nationality Acquisition | -                              | -           |                            |

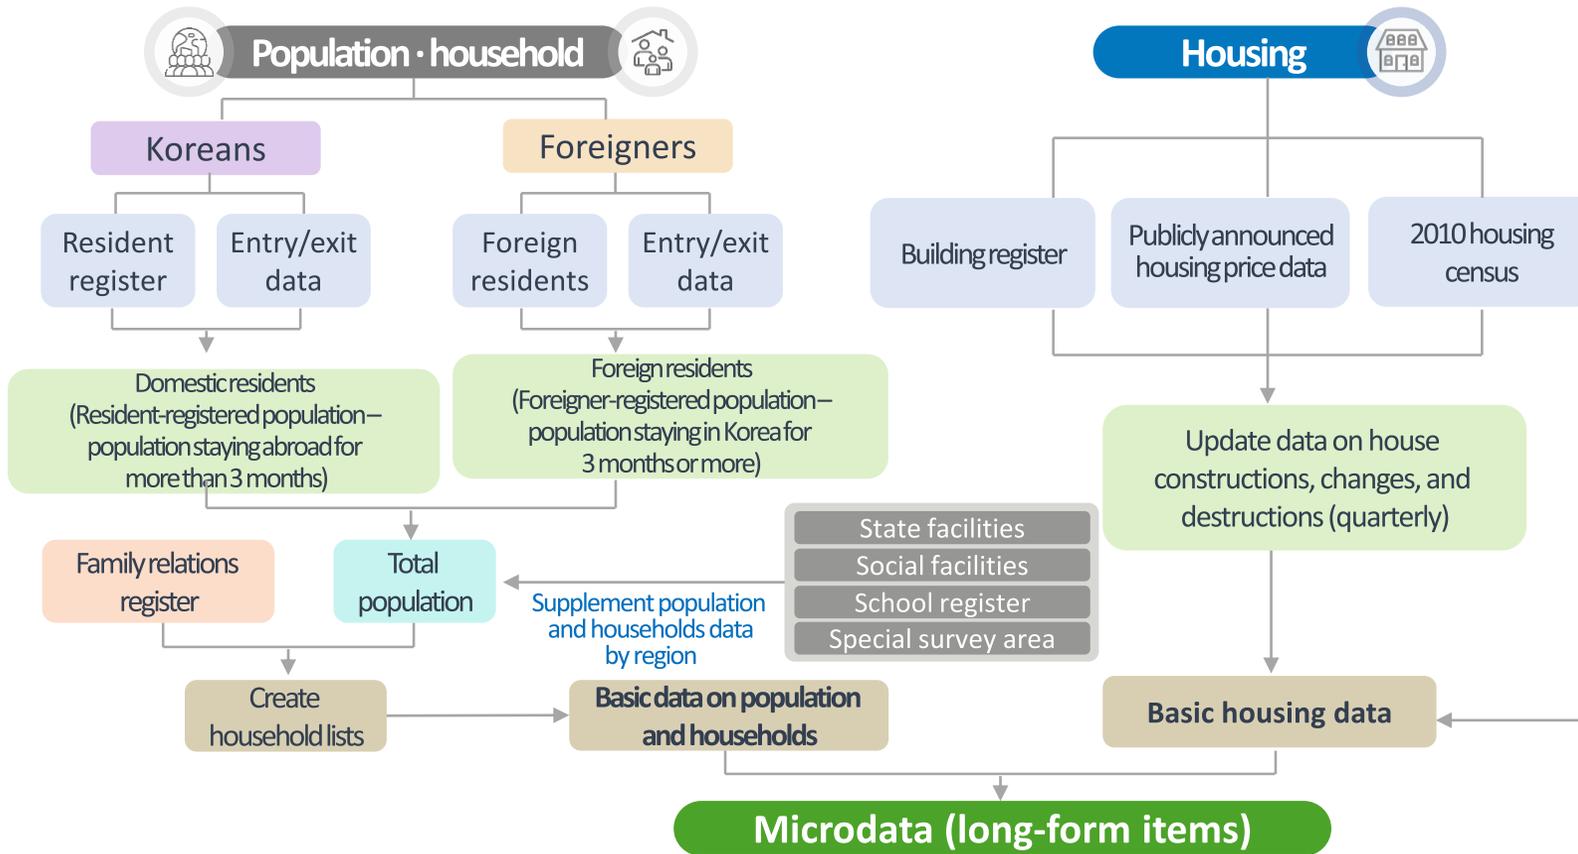

- Complete enumeration items
- Register-based census long-form items
- 20% of sample survey short-form items

Source: Table from KOSTAT. 2018a. "Introducing Register-based Census in Korea."

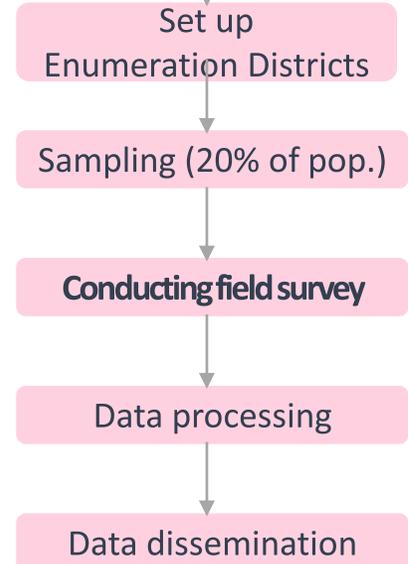

### Framework of the combined census in Korea

#### Register-based census (Short-form items)

#### Field sample survey (Long-form items)

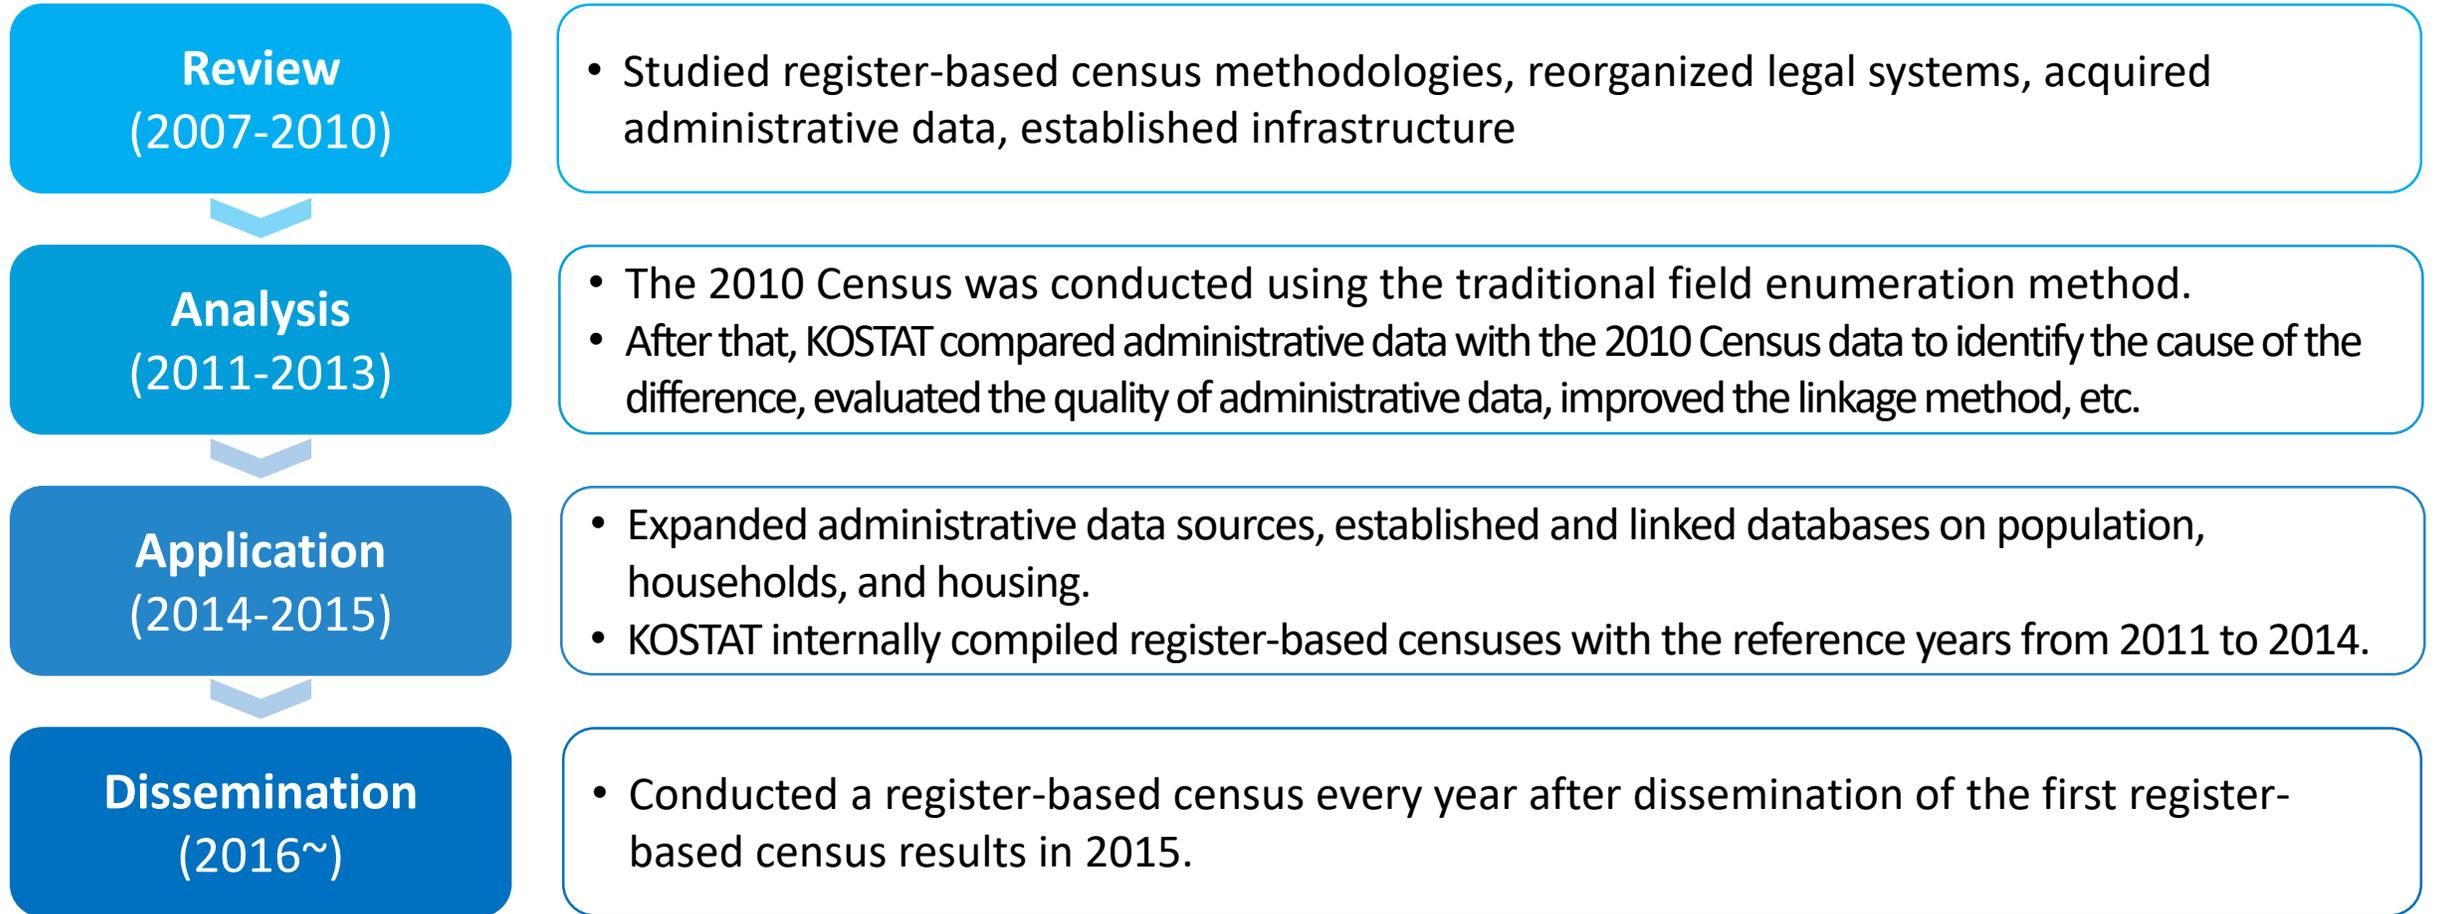

##### Household & Housing Basic Information Survey (Address canvassing)

##### Microdata (short-form items)

### Transforming phases from the traditional census to the combined census

# 2 Challenges and Strategies of 2020 Census

Change  
tomorrow  
with your  
story

### Increasing diversity of population and complex household living arrangements

- Decreasing traditional nuclear family households: (2000) 57.8% → (2010) 49.4% → (2015) 44.9%
- Increasing shares of single-person households: (2010) 23.9% → (2015) 27.2% → (2019) 30.2%
- Increasing non-conventional housing living quarters: (2000) 0.6% → (2010) 3.0% → (2015) 3.7%

### Increasing non-response rate and decreasing cooperation with the government

- Increasing non-response rates of the census: (2010) 1.7% → (2015) 2.4%

### Changes in IT environments

- Internet (PCs) response rates of the Census : (2005) 0.9% → (2010) 47.9% → (2015) 48.6%
- The smartphone penetration rate in Korea : (2019) 95%

### Expanded legal basis for using administrative data

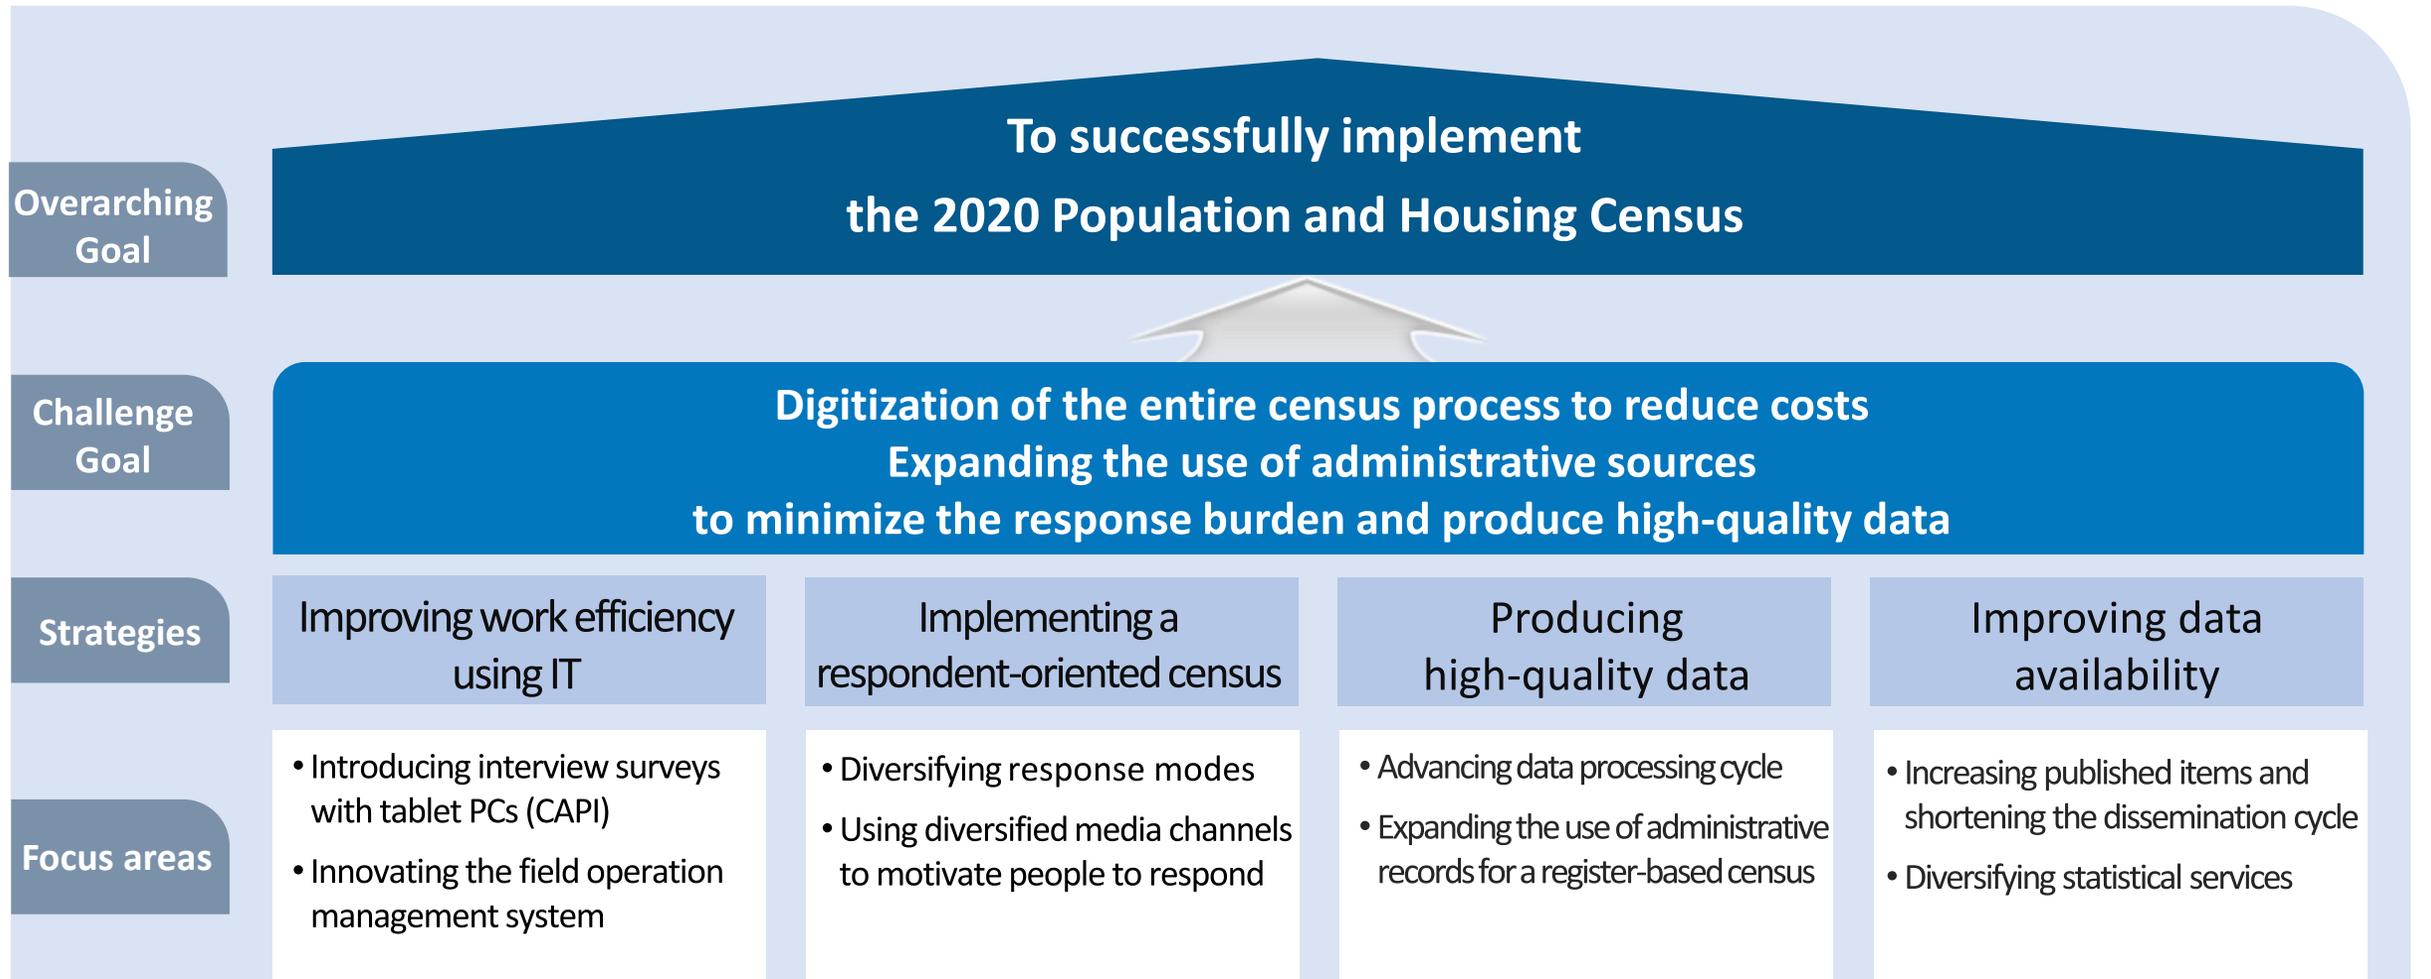

- Reorganized the legal system for implementing a register-based census  
\* Amendment to *Statistics Act* in 2009 and 2014
- Expanded the scope of public institutions that provide data for KOSTAT: to include central administrative agencies, local governments + judicial agencies (2014)

### Growing field enumeration cost and census budget constraints

- Census budget (KRW): (2005) 129 billion → (2010) 180.8 billion → (2015\*) 125.7 billion  
\* Thanks to the register-based census introduced in 2015, total census costs have decreased compared to the previous cycle, but field enumeration costs have significantly increased

### Establishing 2020 Census strategies through internal and external environmental analysis

### • Census reference day

- Nov. 01, 2020. 0 a.m.

### • Enumeration period

- Internet self-response: Oct. 15-31 (17 days)
- Field interview (nonresponse follow-up): Nov. 1-18 (18 days)

### • Target of census

- All Koreans and foreigners residing in the territory of the Republic of Korea as of survey reference date, and their living quarters

### • Organization

- Organized by Statistics Korea and implemented by local governments

### • Census items

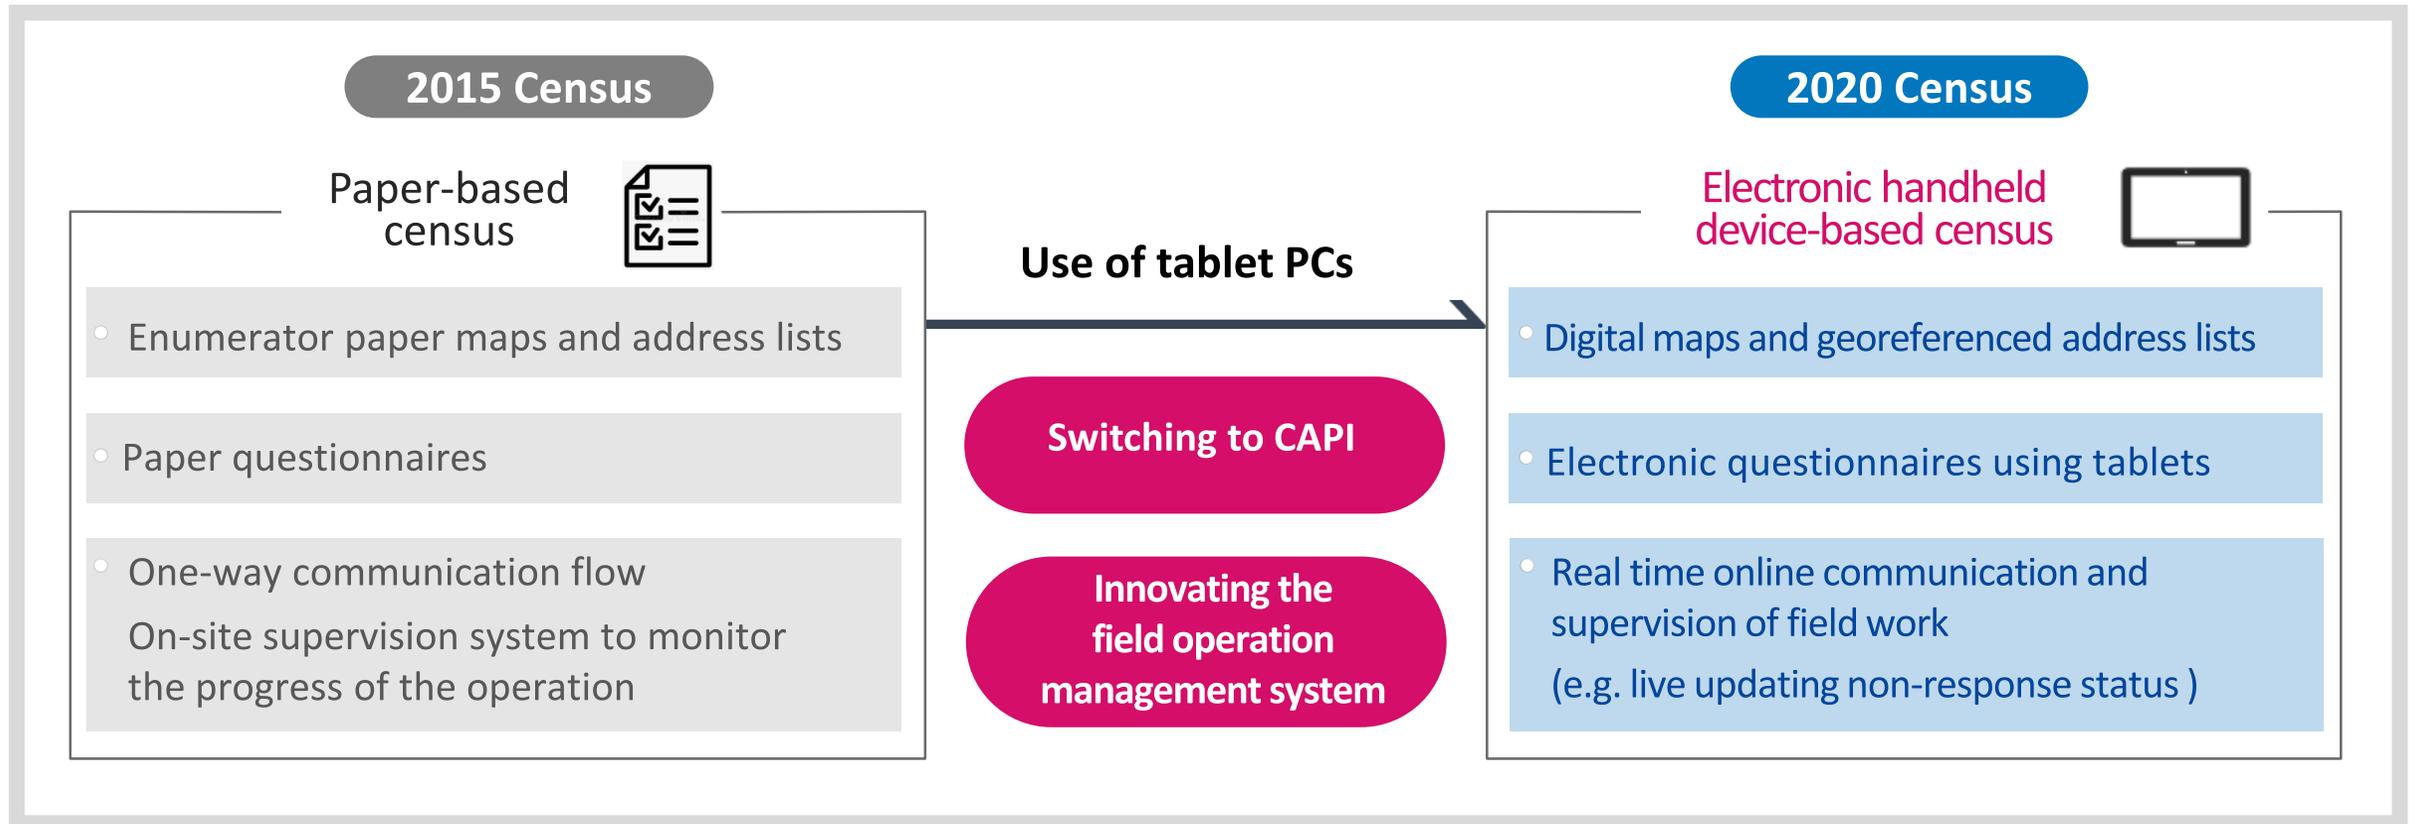

- 55 items (45 covered by field sample surveys, 10 substituted with administrative data)

# 4) The first use of tablet PCs to collect census data

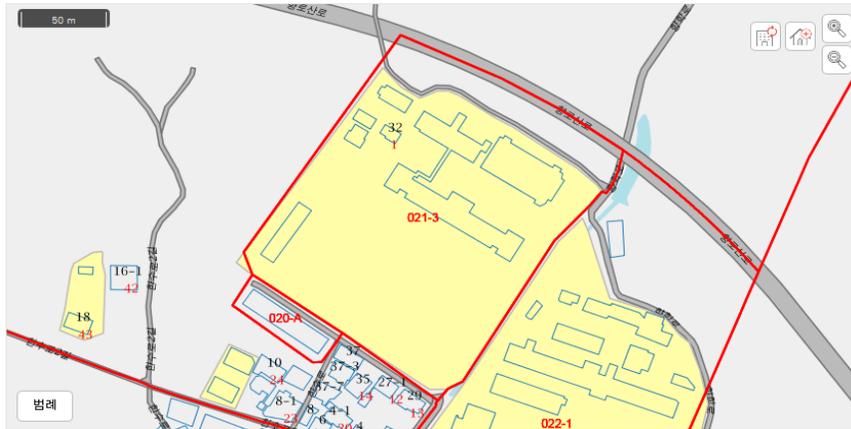

- The first use of handheld computer devices (tablet PCs) to collect census data in the field enumeration
  - Replacing paper-based enumerator maps and address lists to digital maps and georeferenced address lists
  - Changing from Paper and Pencil Personal Interview (PAPI) to Computer-assisted Personal Interview (CAPI)
  - Providing real time two-way flow of field operation information (e.g. monitoring enumerator work and updating non-response status)

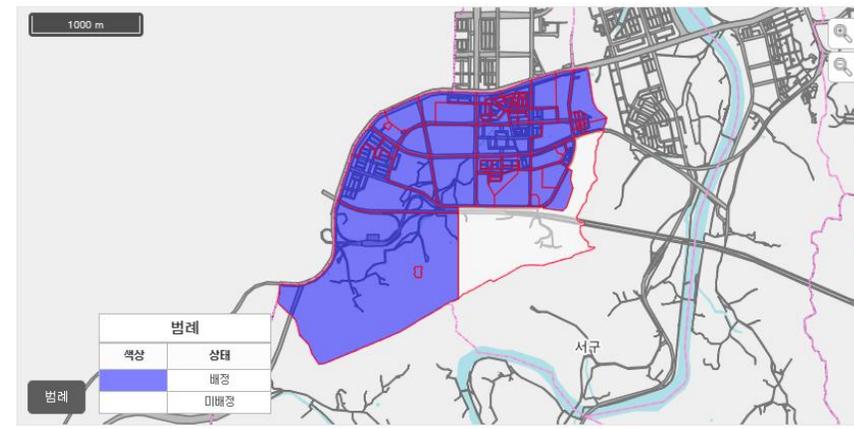

### Enumeration district map

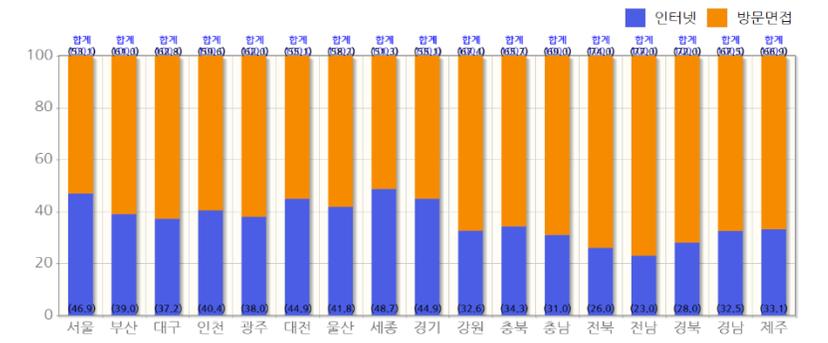

### Enumeration work assignment

### Progress rate by response mode

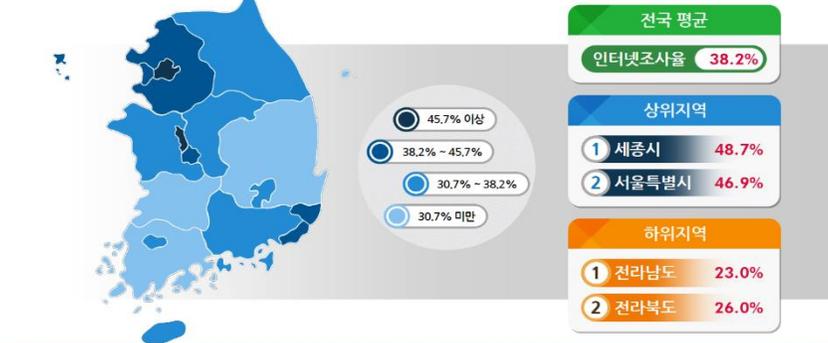

2020 Census 인구주택총조사 POPULATION AND HOUSING CENSUS  
 총조사 진행현황 2020.11.25(수) 23:55 기준 5분 간격 갱신

공시사항

### Progress rate of internet response

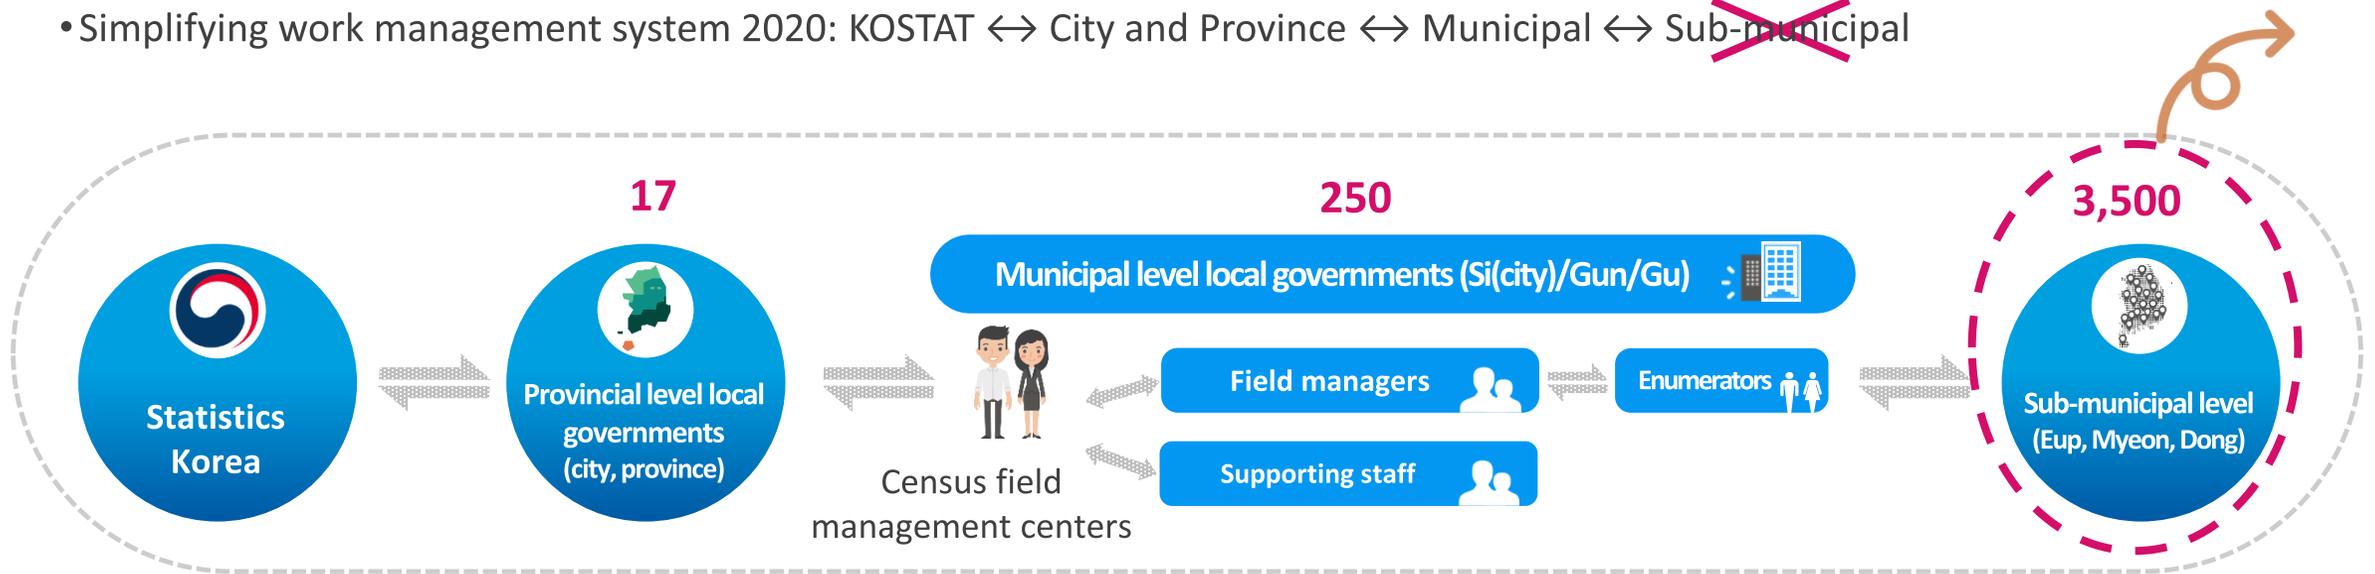

2020 Census 인구주택총조사 POPULATION AND HOUSING CENSUS  
 인터넷 조사현황 2020.11.25(수) 23:55 기준 5분 간격 갱신

공시사항

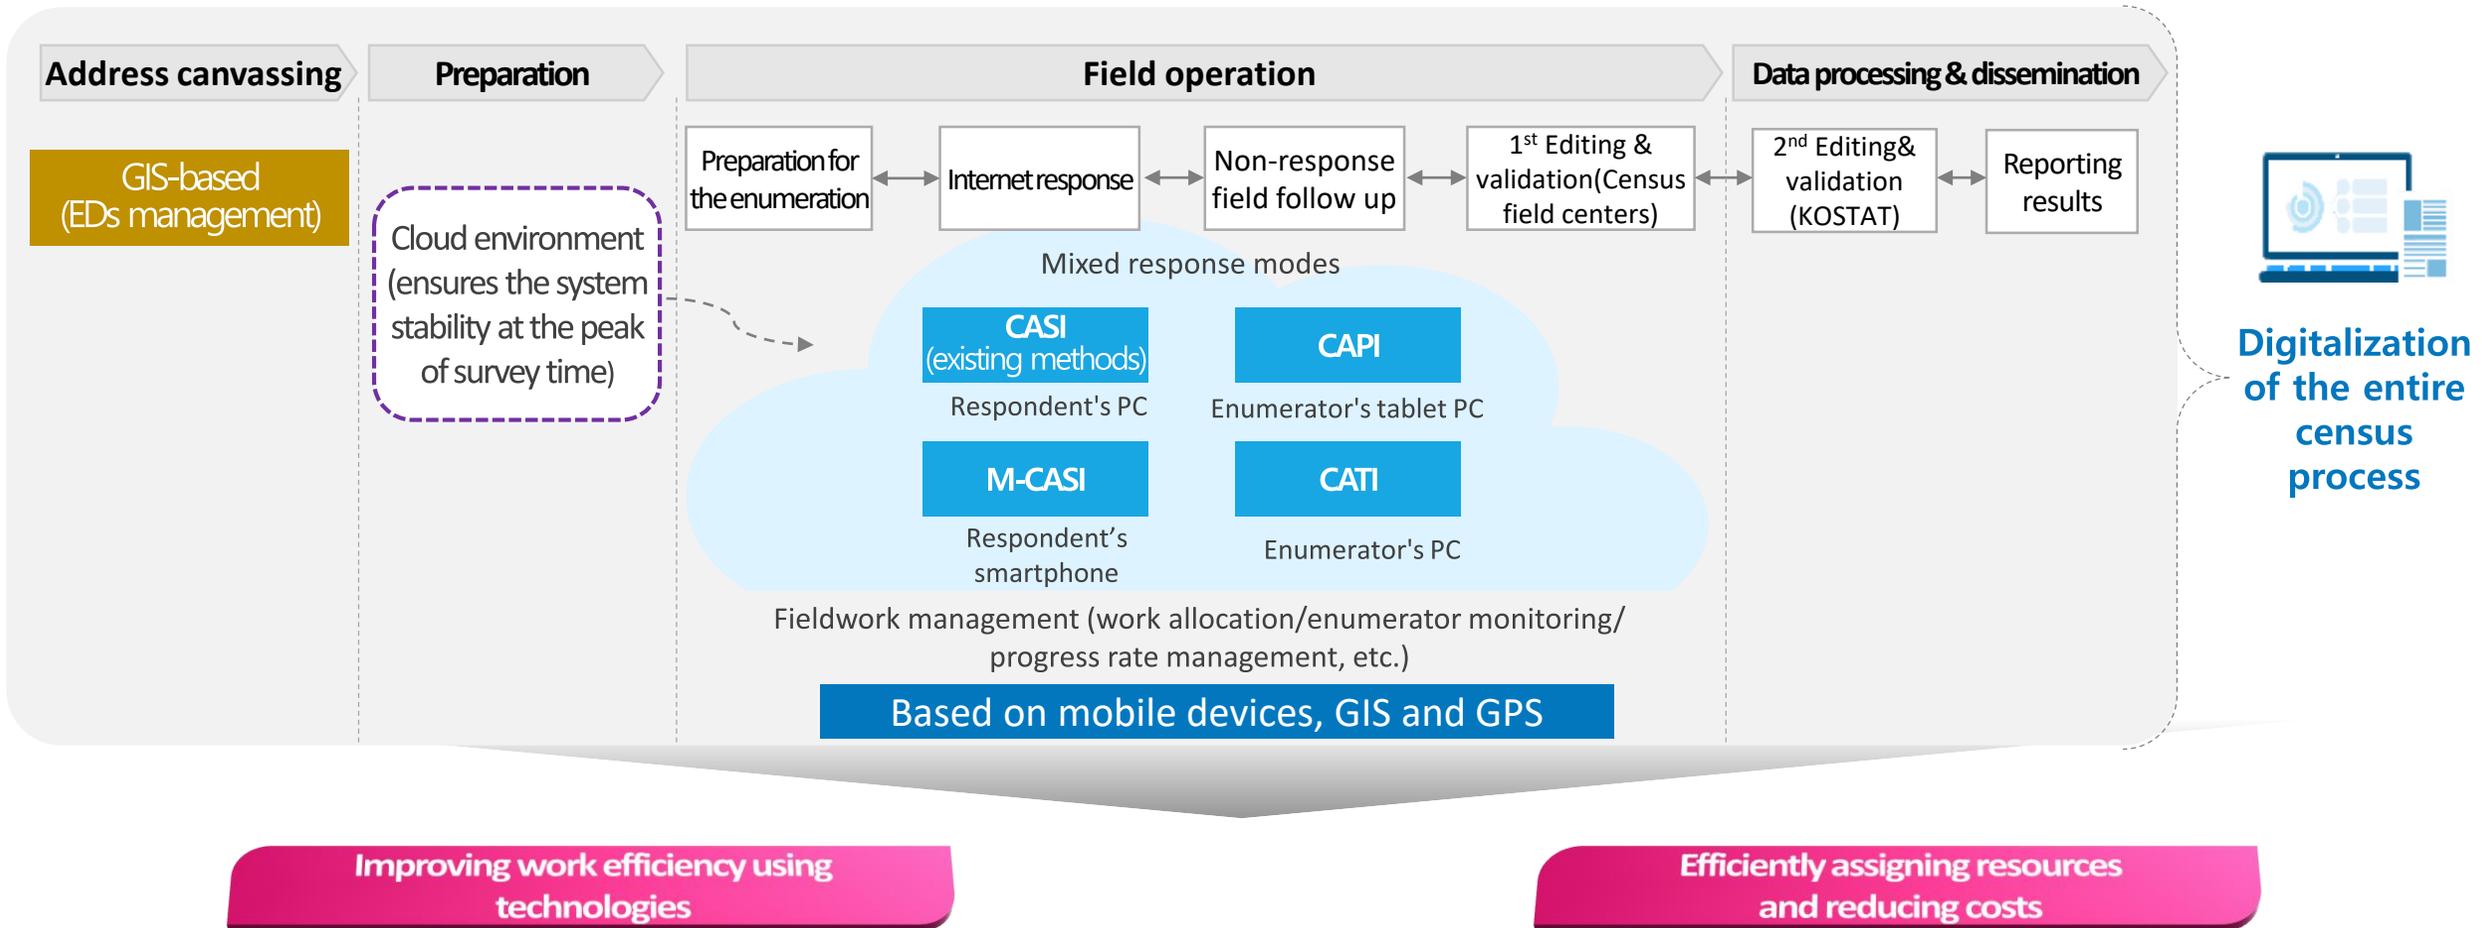

- Eliminated the need of daily meetings with field managers and enumerators at the census management centers by introducing tablet PCs
  - \* The previous census required frequent visits for enumerators to receive daily cases and submit paper questionnaires/reports back to field managers.
  
- Reduced the number of census field management centers and staff, and simplified field management system
  - Reducing the number of field census centers as 92.8% (3,500 sub-municipal level centers in 2015 → 250 municipal level centers in 2020)
  - Reducing staff working in census centers 38.6% (44,000 → 27,000, down): labor costs and operating costs saved
  - Simplifying work management system 2020: KOSTAT ↔ City and Province ↔ Municipal ↔ ~~Sub-municipal~~

# 6) Digitization of the entire census process

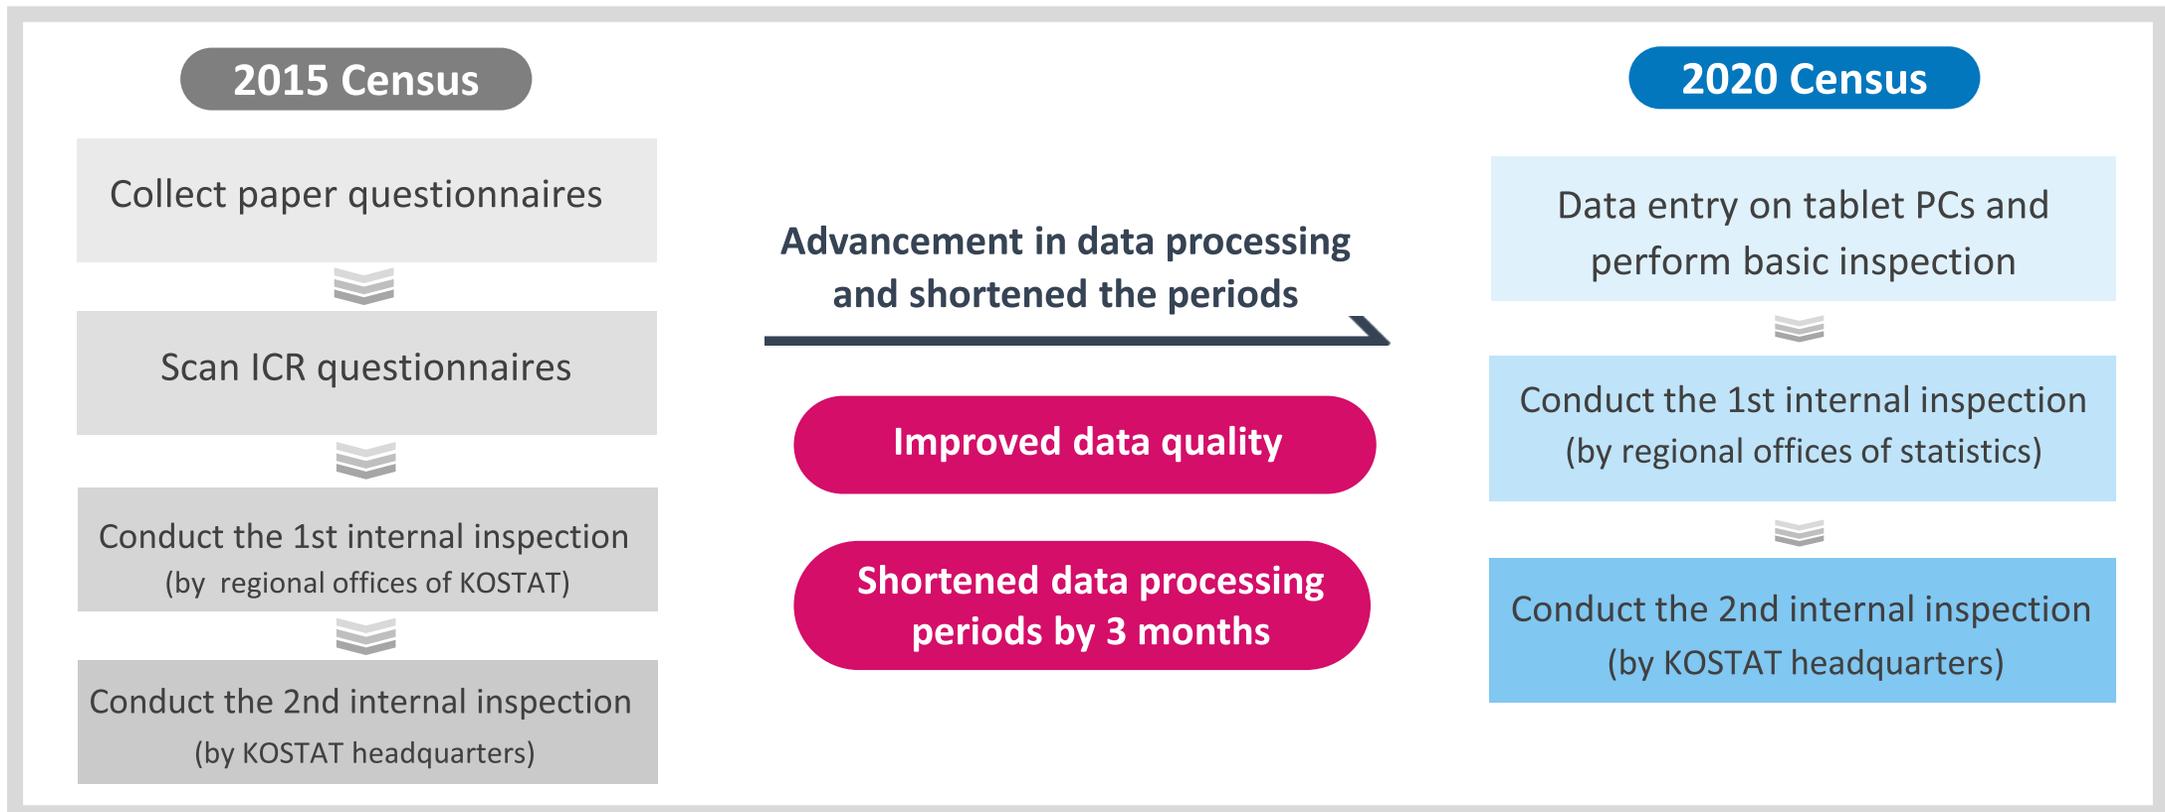

- Digitized the entire census process in line with the introduction of tablet PCs

# 7) Advancement in data processing cycle

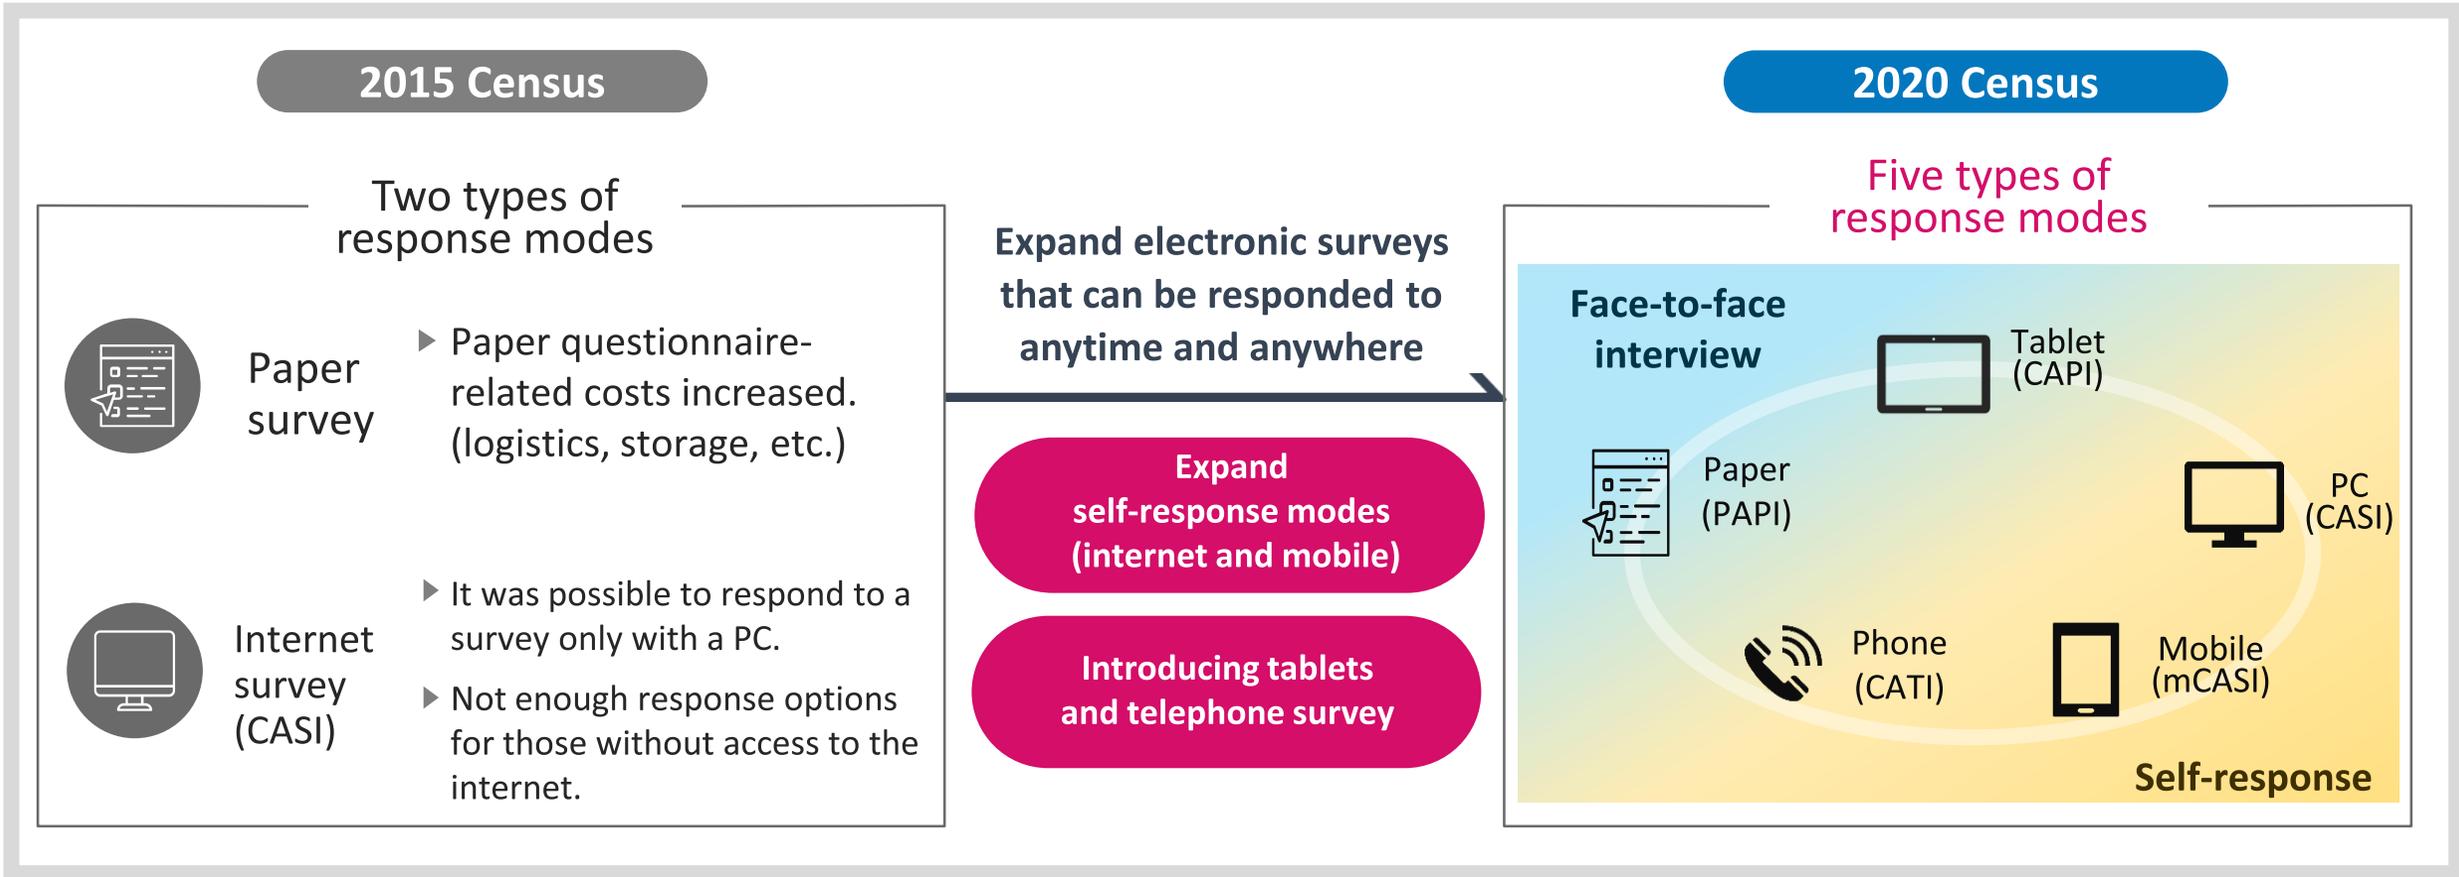

- **Faster data collection:** no need to collect and manually scan ICR paper questionnaires anymore due to using tablets
- **Reduced errors** by providing **automated validation rules within tablets during data entry** thereby allowing for data quality checks on the site (the number of errors per household in 2020 was 1.1, down 1.7 in 2015 )
- Due to the reduced time needed for data processing, 2020 census data were **released three months earlier** than the previous paper-based census.

# 8) Diversification of response modes

- Introduced the first use of **tablets/mobile/telephone response modes** to foster a survey environment where people can respond anytime, anywhere, in a preferred way

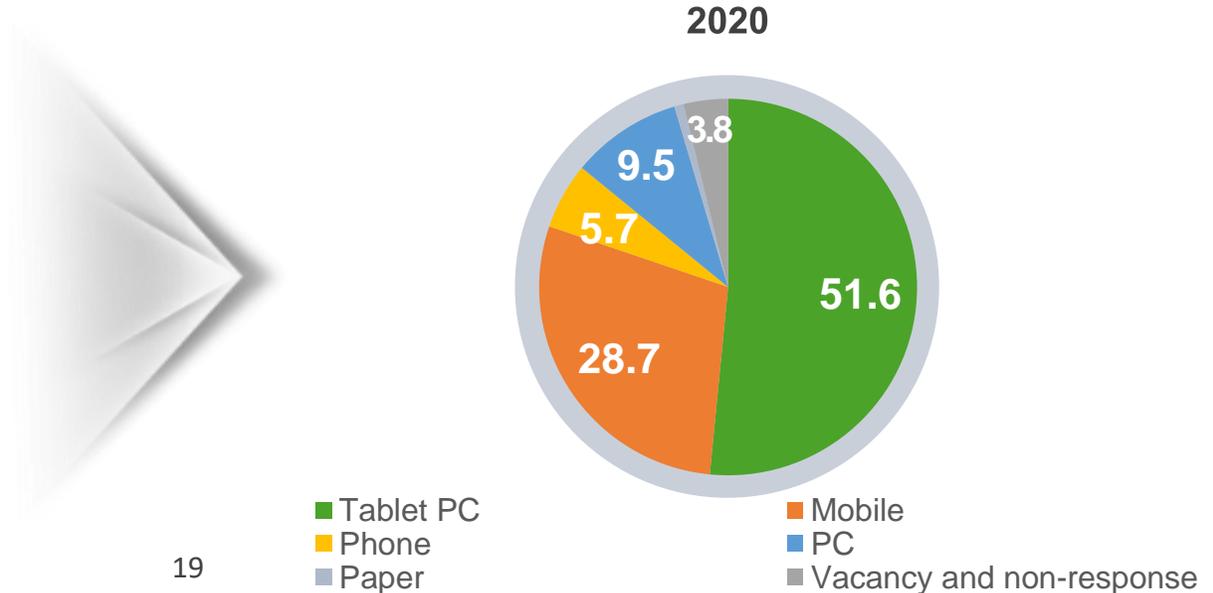

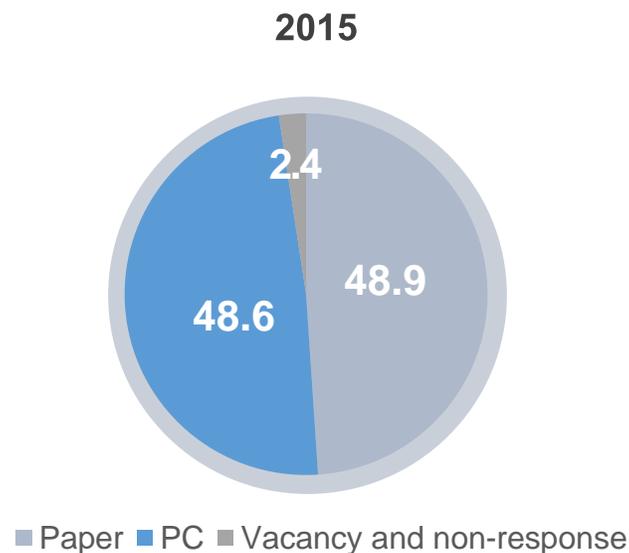

# 8) Diversification of response modes

- For the first time, KOSTAT introduced **telephone surveys** for those with poor access to the internet or those who don't prefer face-to-face interviews.
  - Providing the 'reserve preferred interview time' function on the website (census.go.kr) that allows respondents to answer over the phone at a preferred time
- Established an integrated system that allows respondents to **continue to respond** even with **response mode changes**.
  - e.g. Desktop PC → Mobile → Tablet PC
- However, KOSTAT also used **paper questionnaires (less than 1%)** at elderly facilities that enumerators could not access due to the Covid-19 restriction.

Census response rate by response mode (%)

# 9) Diversification of publicity and promotion activities

- Made better use of a variety of **digital advertising** by reflecting changes in people's media use
- Strengthened **promotional activities** to increase the response rate of non-contact self-response internet (mobile) surveys
- Emphasized **the benefits** that survey participation brings to the public

### 2015 Census

Focus on traditional media

Traditional media

TV, Newspaper, Radio

Message

Emphasize government's data use for creating policies

### Key initiatives

Create an environment where people are willing to participate in the census

Digital advertising using multiple channels/contents

Encourage self-response via mobile

### 2020 Census

Expansion of digital media/content

Digital media

YouTube, influencer, webtoon, digital news, etc.

Message

about the importance and utility of the census

[ Representatives of the people ]

Tell us your opinion as a representative of the people.

# 9) Diversification of publicity and promotion activities

- Maximized outreach mainly using **TV and the internet** with advertising exposures
- Surrounded every household with memorable messages **at daily touchpoints**

### TV advertising

### Product placement in TV drama

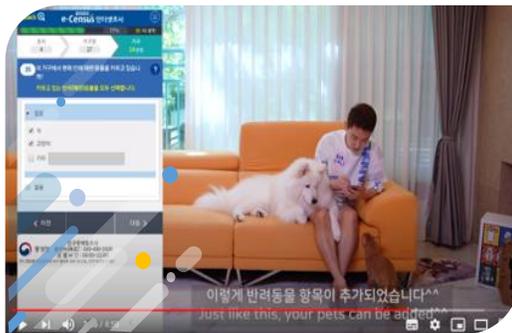

### Campaign song

### Lecture

### Collaboration with online creators

### Webtoon

### Collaboration with artists

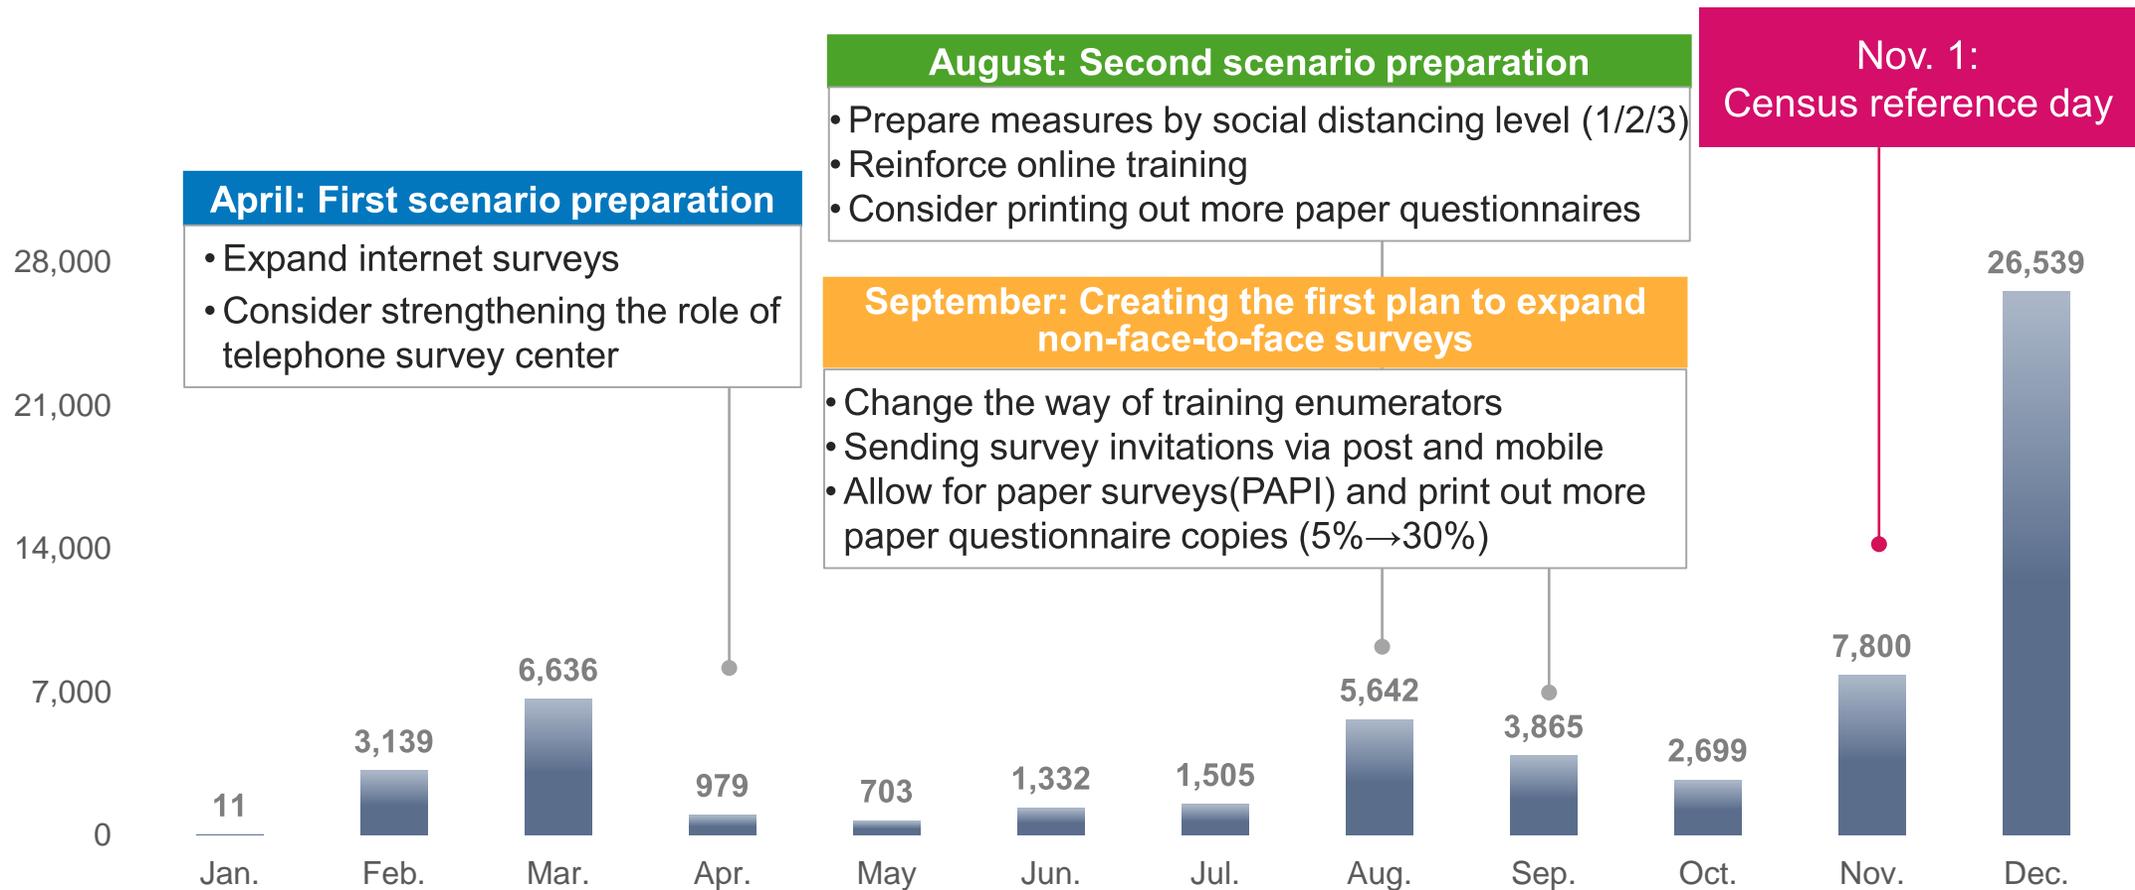

### Volunteering

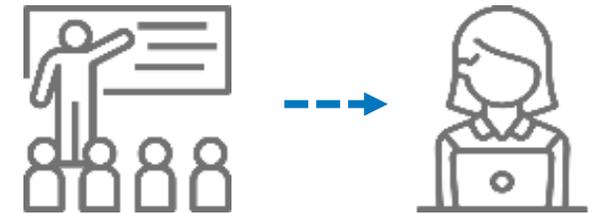

### ▣ Pandemic status and response measures for each field enumeration phase

Monthly confirmed cases in Korea (2020) and response strategies by census sample survey phase

- Established **step-by-step response plans** while monitoring the pandemic status and adjusting the resource allocation
  - Minimized visits and contacts** to ensure the safety of respondents and enumerators.
  - Non-response status** was updated in real time to help enumerators to prevent visiting households that have already submitted responses through online.
  - Minimized face-to-face enumerators group training and focused on online training.**
  - In the end, KOSTAT conducted census field surveys of 4 million households while ensuring the safety of respondents and related personnel.

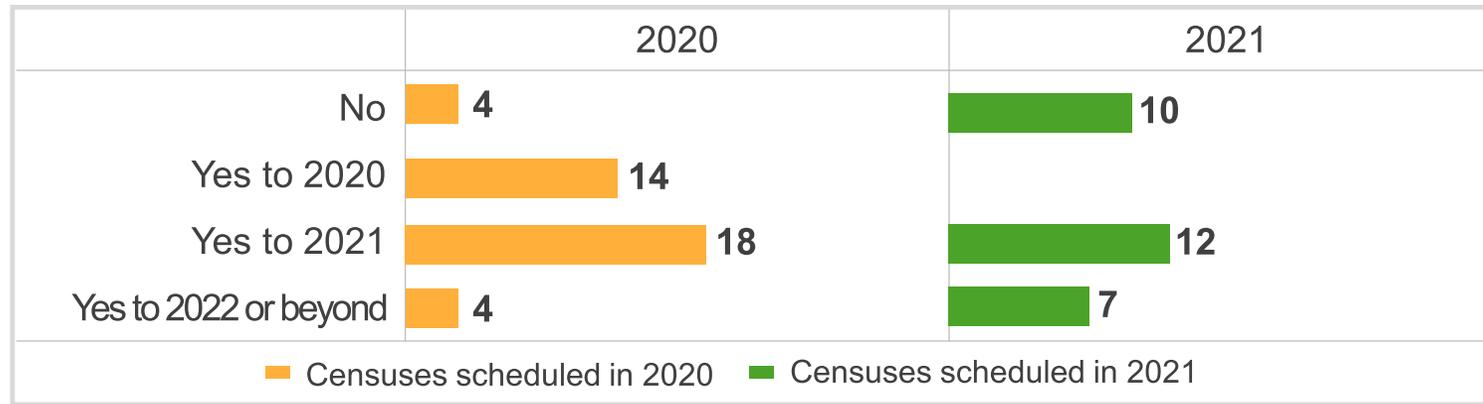

- KOSTAT conducted the field enumeration for the 2020 Census as scheduled, but internet self-response period was slightly extended (35 days → 40 days).

### Impact of COVID-19 on the world 2020 census round (UNSD, '21. Mar.)

- 110 Countries were supposed to conduct the 2020 census in the years ending 0 and 1.
  - Of these countries, 14 conducted the census as scheduled despite the COVID-19 pandemic.
  - 71 countries (65%) postponed or stopped the census.
- 39 countries (35%) plan to implement the census by the end of 2021, and most of them decided to extend census periods.

#### Did you postpone or extend the fieldwork?

# 3 Achievements of 2020 Census

Change  
tomorrow  
with your  
story

- Drastically reduced survey staff and census field centers by reengineering the survey process based on ICT
- Reduced operational costs by digitizing paper questionnaires and maps

### Fiscal effects

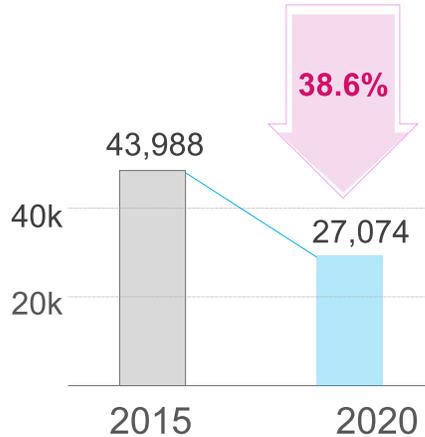

23.6 billion KRW saved

## Reducing census costs by conducting a smart digital census

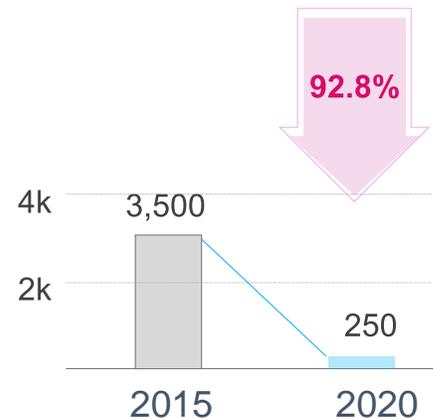

Significantly reducing costs of enumerators, census field centers, and paper questionnaires from the previous census

- Reduction of staff working in census field centers

- Reduction of census field centers

### Fiscal effects

(total of 23.6 billion KRW saved)

#### Reduced labor costs

(26.9 billion KRW)

#### Reduced census field centers operating costs

(6.3 billion KRW)

#### Increased tablet PC purchases/ call center operating expenses

(9.6 billion KRW)

## 2) Improvement of census efficiency with the expanded use of electronic surveys and administrative data

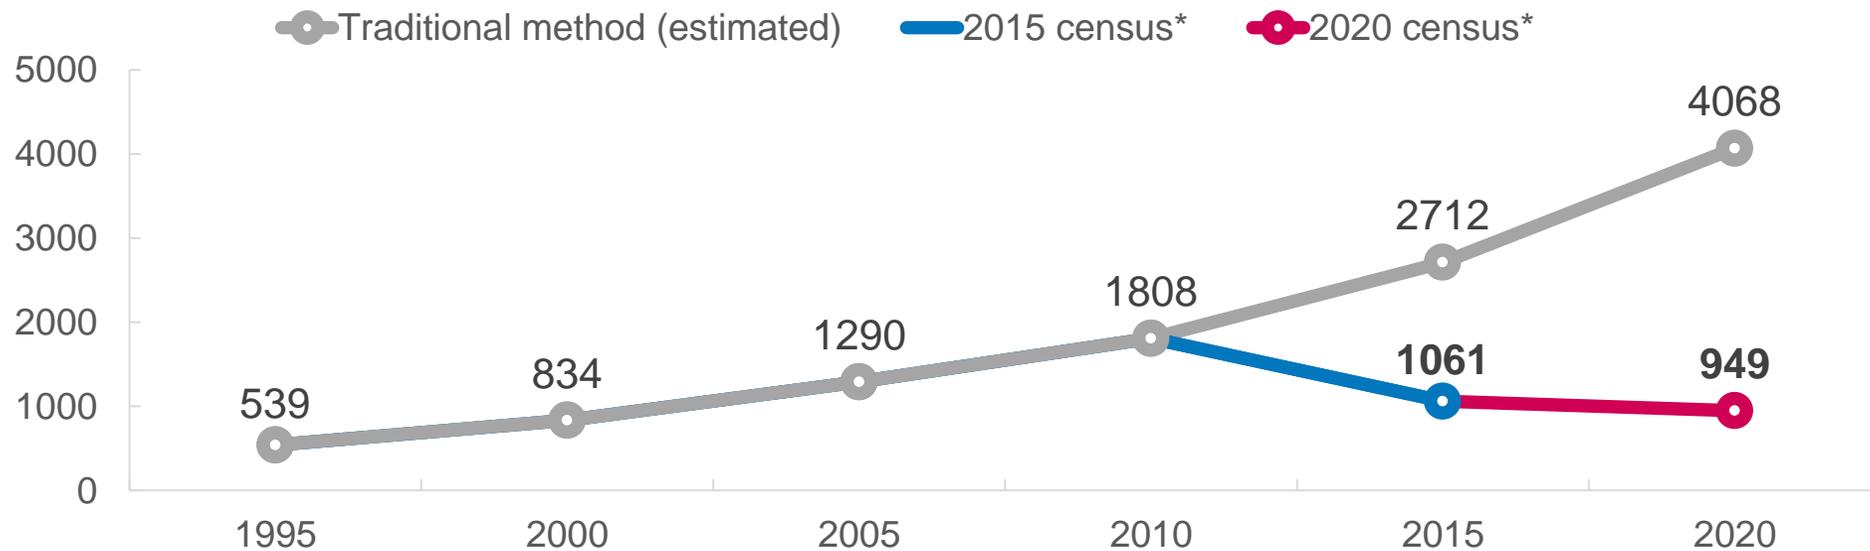

### ▣ Census budget trends

- 2015: **Saved 74.7 billion KRW** \* compared to 2010 census thanks to the introduction of a register-based census
- 2020: **Saved 11.2 billion KRW**\* compared to 2015 census thanks to the introduction of electronic survey and innovating of the field survey management system

\* Only for the sample survey

### Census budget (100 million KRW)

\* Only for the sample survey

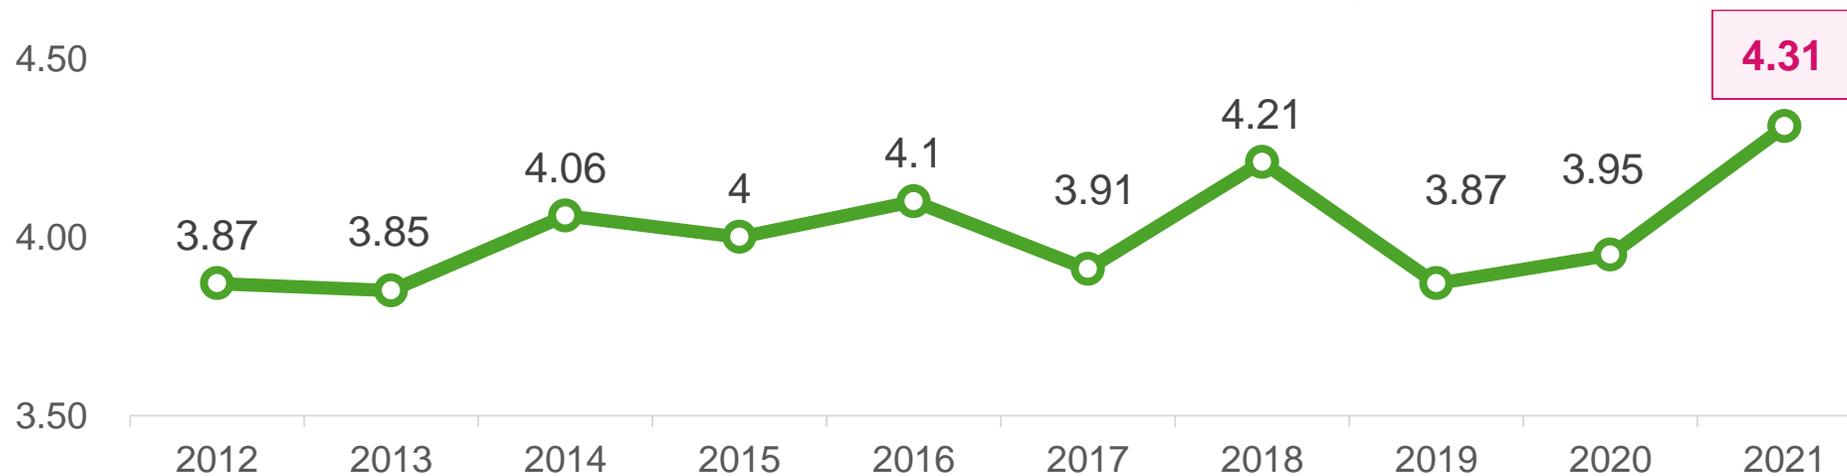

## 2) Improvement of census efficiency with the expanded use of electronic surveys and administrative data

▣ Compared to the previous census cycle:

- Less census budget (106.1 billion → 94.9 billion KRW)
- More survey items (52 → 55)
- Faster dissemination (3 months earlier than before )
- Census data user satisfaction rate recorded the highest level over the last 10 years (4.31/5.0).

Census data user satisfaction rates over the last 10 years (score)

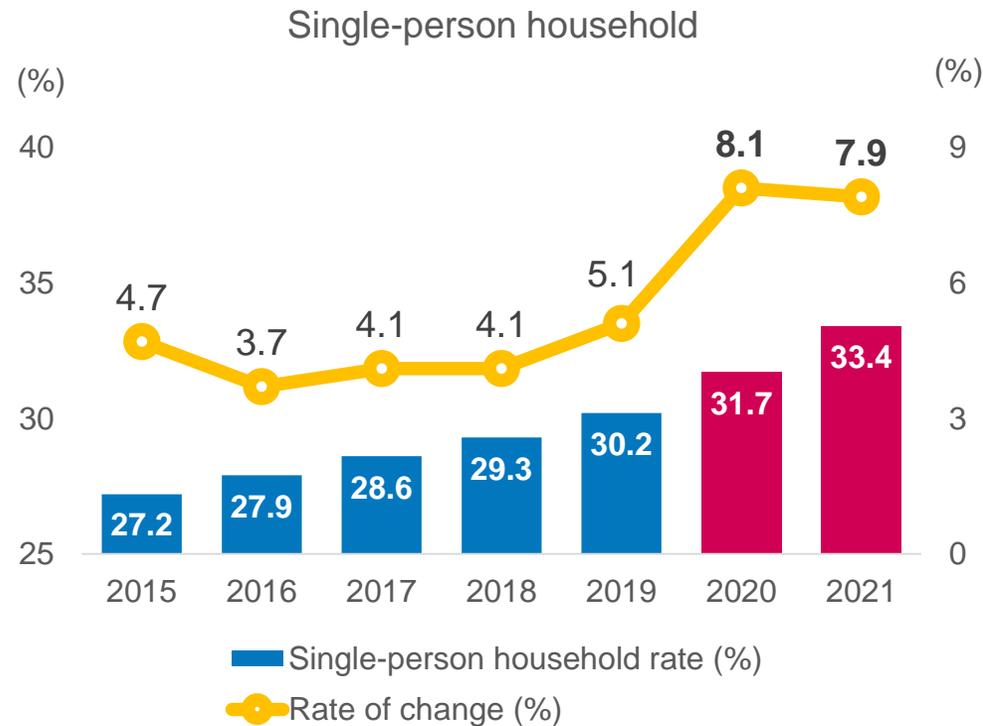

### 3) Understanding pandemic-caused social changes through census results

#### ▣ Increase in the single-person household

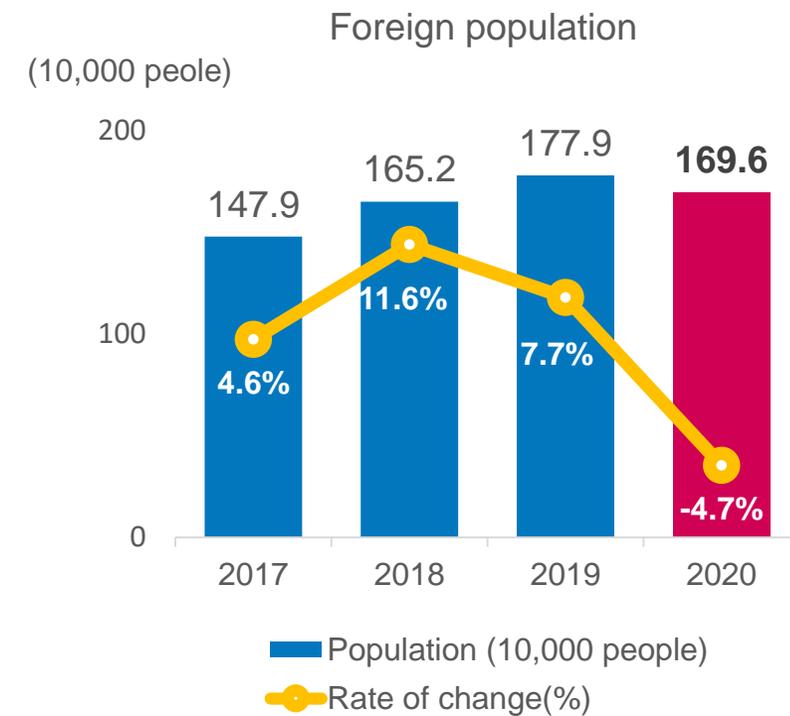

- 31.7% among all general households in 2020 (up 8.1% from 2019)

\* Source: KOSTAT, *Population and Housing Census*, each year.

#### ▣ Decrease in the foreign population

- Impact of border closures due to COVID-19 (down 4.7% from 2019)

\* Source: KOSTAT, *Population and Housing Census*, each year.

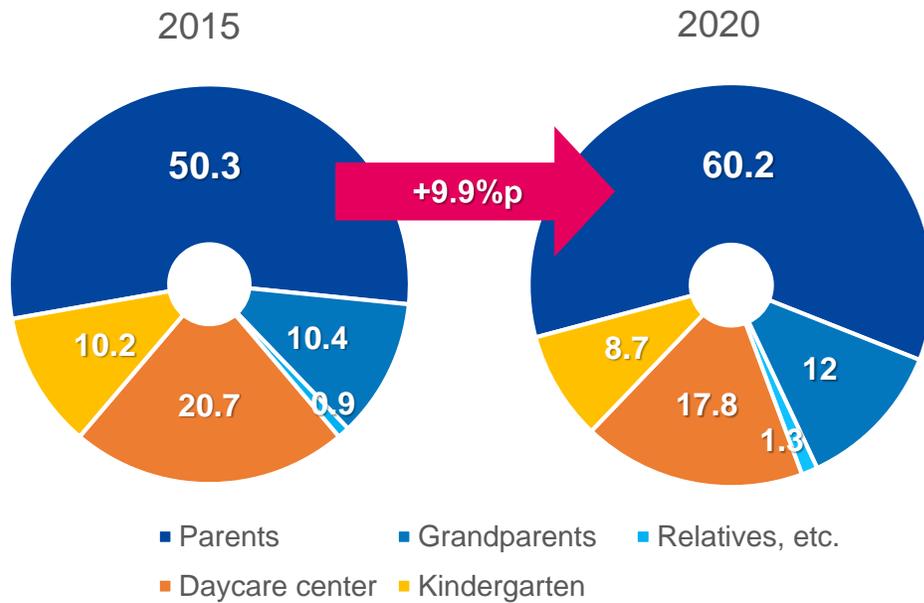

### 3) Understanding pandemic-caused social changes through census results

#### Daytime childcare

- Increase in parental care during daytime (up 9.9%p from 2015)

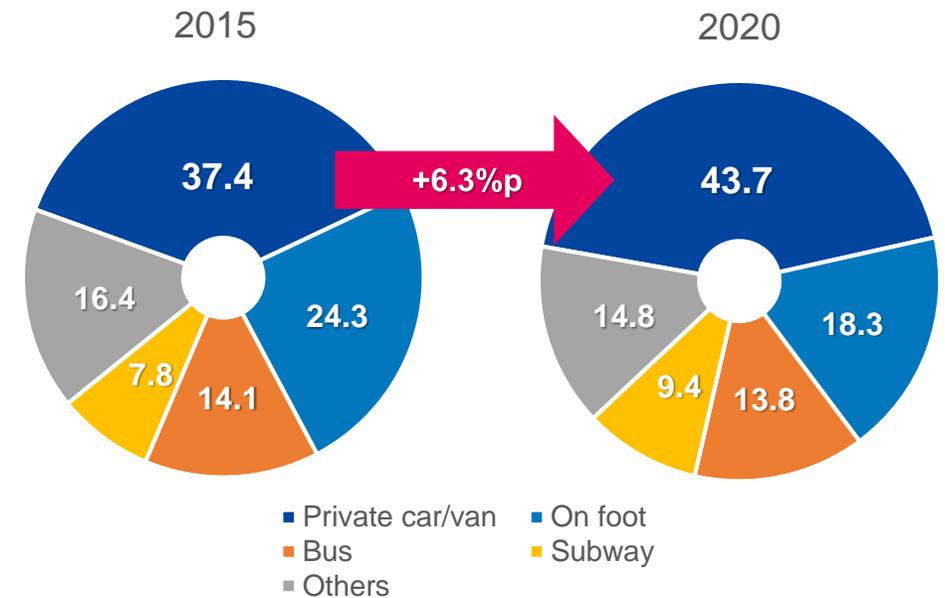

Children by daytime childcare status (%)

#### Commuters' transport modes choice

- Increase in the share of private cars/vans (up 6.3%p from 2015)

Commuters' transport mode choices (%)

# 4 Planning for 2025 Census

Change  
tomorrow  
with your  
story

### Comprehensive analyzing of the COVID-19 impact on census

- Analyzing changes in population and household characteristics caused by COVID-19 by using the register-based census results released every year

### Building an address register with GIS

- Redesign address canvassing (5 years → 1 year, full field canvassing → selective field canvassing)
- Providing more complete and accurate new sample frame based on annual register-based census

### Improving work efficiency using IT

- Artificial intelligence: industrial/occupational classification coding, call center, data providing chatbot, etc.
- Expanding the use of digital data such as GIS and GPS satellite images

### Making it easier for the public to respond

- Establishing digital response first, non-response field follow-up second strategy
- Expanding response modes reflecting respondent's preference

### Expanding use of administrative data and improving utility of census data

- Identifying new survey items that can be replace and supplemented by administrative data
- Promoting greater use of census data by linking of various dataset

Change  
tomorrow
